run a ps1 file as administrator

AI Mode All Videos Short videos Forums Shopping Images More Tools

AI Overview

You can run a PowerShell script as an administrator by launching an elevated PowerShell session first, or by creating a shortcut that is configured to run with administrative privileges. Super User +1

Method 1: Launch Elevated PowerShell Console First (Recommended for One-Off Runs)

This is the most common and direct method for running a script as an administrator when needed. Netwrix +1

1. **Open an elevated PowerShell prompt:**
   - Press the **Windows** key, type `PowerShell`, then right-click on **Windows PowerShell** in the search results and select **Run as administrator**.
   - Alternatively, press **Windows + R**, type `powershell`, and then press **Ctrl + Shift + Enter**.
2. **Accept the UAC prompt** by clicking **Yes**.
3. **Navigate to your script's directory** in the elevated PowerShell window using the `cd` command. For example: `cd "C:\Users\YourUser\Documents\Scripts"`.
4. **Execute the script** by typing its name preceded by `.\`. For example: `.\myscript.ps1`. Sentry +3

Method 2: Create a Permanent Shortcut (Recommended for Frequent Use)

This method lets you create a dedicated shortcut that always prompts for administrator rights when double-clicked. Super User

1. **Create a shortcut** to your PowerShell script on your desktop or in another folder. You can do this by right-clicking the `.ps1` file and selecting **Create shortcut**.

2. **Right-click the new shortcut** and select **Properties.**
3. In the **Shortcut** tab, modify the **Target** field to run the script using `powershell.exe`. The target should look something like this (make sure to replace the path with your actual script's path):
   `%SystemRoot%\system32\WindowsPowerShell\v1.0\powershell.exe -File "C:\Path\To\Your\Script.ps1"`
4. Click the **Advanced** button.
5. Check the box for **Run as administrator**, then click **OK.**
6. Click **Apply** and then **OK** to save the changes. When you use this shortcut, it will request administrative privileges automatically. Stack Overflow +4

Method 3: Add the `#Requires` statement to the script

You can add a line of code to the beginning of your script to make it automatically request elevation if it's not already running as an administrator. Reddit

Add the following line as the very first line of your `.ps1` file:

powershell

```
#Requires -RunAsAdministrator
```

When you run the script (e.g., by double-clicking it or running from an unelevated PowerShell session), it will prompt for UAC elevation. Reddit +3
